WORK EXPERIENCE

Software Engineer

Jan 2024 – Dec 2025

DoorFeed — *London*

- Owned a Property Financials feature with no PRD: gathered requirements directly from investment stakeholders, used TDD for accuracy of 20+ forecast metrics, producing cash flow and P&L statements used to evaluate multi-million-euro deals.
- Led the engineering rebuild of the flagship Investment Portal (React, TypeScript), the primary demo product during Series A. Owned architecture and implementation, and ran internal demos to the investment team.
- Built complex financial data visualisations and virtualised data tables (TanStack Table) for deal lists and financial metrics.
- Collaborated with design and product through multiple designer transitions and product pivots, maintaining UI quality and scope discipline throughout.
- Proposed and shipped a browser-native PDF export in one day, replacing a planned sprint-long backend rendering approach. Eliminated a new third-party dependency entirely.

Software Engineer

Apr 2021 – Sep 2023

Upstreet — *Sydney*

- Shipped a React/TypeScript/Next.js multi-tenant rewards platform for 500+ employees across 5 organisations, delivered 2 weeks ahead of a hard client deadline.
- Took sole ownership of the User Portal (React, Node.js) after the team halved mid-project. Shipped to 23K+ users.
- Built bulk reward administration tooling that reduced manual processing time by 90%, identified the bottleneck by sitting with ops staff, not from a ticket.

PROJECTS

Elsewhere: Secondhand Product Matching (elswhr.shop)

2026

- Solo full-stack product matching new retail products to secondhand clothing listings: Chrome extension scrapes retailer pages, a Node/Express/PostgreSQL backend scores candidate matches, and a React/Vite review UI handles human confirmation.
- Designed a weighted relevance algorithm (brand, title, price, category) enhanced with transformer embeddings to rank candidate matches, with labelled data for model training.

EDUCATION

Macquarie University

Graduated 2021

Bachelor of Engineering, Software (Honours)

SKILLS

- **Frontend** React, TypeScript, Next.js, TailwindCSS, HTML, SASS/CSS, Storybook, Vite
- **AI-Native & Tooling** Claude Code, Cursor, Jest, React Testing Library, Cypress, TanStack Query
- **Backend & Platforms** Node.js, PostgreSQL, Go, Python, AWS/GCP, Vercel
